

Mr Green Energy Proposed Hydrogen Filling Station Co-op

- Hydrogen is clean, safe and can be extracted from water-one of our most abundant resources on the island
- Every major car company has hydrogen cars in production and Hawaii has already passed hydrogen highway legislation
- Current gasoline engines can be converted to use hydrogen as fuel just like Natural gas or propane conversions
- It is time to embrace this technology and decrease our vulnerability and reliance on fossil fuels

We are looking for 2000 people to invest \$2500 each to build a hydrogen filling station co-op. If you are interested in learning more please contact gogreen@mrgreenenergy.com
